PROFESSIONAL SUMMARY

IT professional with hands-on experience across software development, database management, and system-level hardware troubleshooting, seeking to contribute to the IT Cell Department of an Ex-Servicemen / Military Hospital. Skilled in maintaining and developing internal software systems, managing digital records and databases, and providing reliable technical support in structured, discipline-driven environments. Combines full-stack development expertise (MERN Stack) with hardware training and a strong, detail-oriented approach to system administration, data security, and documentation — well suited to the operational rigor required in a military hospital IT setup.

KEY SKILLS — IT CELL & HOSPITAL IT SUPPORT

- IT Cell Operations & Technical Support — hardware/software troubleshooting, system maintenance, and issue resolution
- Database & Records Management — MongoDB, Firebase, Firestore; structured data handling relevant to patient/records databases and Hospital Management Information Systems (HMIS)
- Networking & Systems Fundamentals — hardware systems training, system-level optimization, LAN-based troubleshooting
- Software Development & Maintenance — building, updating, and maintaining internal web-based tools and portals (React.js, Node.js, Express.js)
- Data Entry, Documentation & Record-Keeping — accurate data handling, version control (Git/GitHub), and process documentation
- MS Office & Digital Administration — proficient with standard office and productivity tools for reporting and record management
- Data Security & Access Control — implemented role-based access control, authentication, and session management in live applications
- Discipline & Process Adherence — Agile methodologies, code review participation, and structured, deadline-driven delivery

TECHNICAL SKILLS

Programming & Web Development: React.js, Next.js, Node.js, Express.js, JavaScript (ES6+), HTML5, CSS3, jQuery, RESTful APIs

Database & Data Management: MongoDB, Firebase Realtime Database, Firestore, Data Records Management

IT Infrastructure & Hardware: Hardware Systems Troubleshooting, System-Level Optimization, Network Fundamentals, System Maintenance

Tools & Platforms: Git, GitHub, Firebase, npm, Webpack, Babel, VS Code, MS Office Suite

Core Competencies: Technical Support, System Administration, Database Management, Documentation, Problem Solving, Agile Methodologies, Cross-Functional Coordination

PROFESSIONAL EXPERIENCE

Frontend Developer Intern

Sep 2025 – Dec 2025

Unified Mentor

Remote

- Provided ongoing technical support by developing, testing, and maintaining web-based applications, ensuring stability, performance, and cross-platform compatibility
- Maintained structured records of code changes and documentation using Git, supporting audit-ready, traceable version history
- Collaborated with cross-functional teams to translate requirements into functional systems, following defined process and review protocols
- Diagnosed and resolved technical/software issues, improving system reliability and reducing downtime through proactive troubleshooting

- Applied performance optimization techniques (code splitting, lazy loading) to improve system efficiency and response times
- Participated in structured code reviews and quality checks, supporting compliance with development standards

KEY PROJECTS

Firestore Authentication & Access Control System | *React.js, Firebase, Context API*

- Built a secure user authentication and access-control system supporting email/password and single sign-on login
- Implemented role-based access control and persistent session management using token-based authentication — directly applicable to securing sensitive records systems

Full-Stack Records & Transaction Platform | *MERN Stack, Stripe API, Redux*

- Developed a full-stack platform for managing structured records, transactions, and status tracking using Express.js and MongoDB
- Built and integrated RESTful APIs for reliable, real-time data processing and record updates

Real-Time Communication & Status Tracking System | *Node.js, Socket.io, MongoDB, React*

- Built a real-time system for instant status updates and communication using WebSocket connections
- Designed a scalable backend architecture to reliably handle concurrent connections and maintain accurate historical logs

Task & Records Management Dashboard | *Next.js, Firebase, Tailwind CSS*

- Built a records/task management system with real-time synchronization, filtering, and status tracking
- Used Firebase for real-time database updates, ensuring accurate, up-to-date record visibility

ACHIEVEMENTS, TRAINING & CERTIFICATIONS

- Completed dedicated hardware training, strengthening system-level troubleshooting and IT infrastructure understanding — directly relevant to IT Cell support duties
- Completed structured 3-month technical internship at Unified Mentor with consistent, on-schedule project delivery
- Completed 5 database/records-integration projects covering real-time data handling, security, and authentication

ADDITIONAL INFORMATION

Languages: Punjabi, Hindi, English

Availability: Immediately available for full-time opportunities

Interests: Open Source Contribution, Competitive Programming, Technical Documentation, Latest IT & Web Technologies
